

PRABHAT DHAR

Data Analyst | Aspiring Data Scientist

London, UK • prabhatdhar32@gmail.com • [linkedin.com/in/prabhat-dhar](https://www.linkedin.com/in/prabhat-dhar) • github.com/Xclipxz07 • xclipxz07.github.io/Portfolio

Right to work in the UK: Skilled Worker Visa sponsorship required

PROFILE

Data professional with hands-on experience turning operational records into dashboards and decisions, built on a Physics BSc and a Distinction-level Postgraduate Diploma in Data Science. Comfortable across the full analyst workflow — cleaning messy real-world data in Python and Excel, writing SQL for reporting, and building Power BI dashboards used by non-technical stakeholders. Currently deepening machine learning and cloud data engineering skills through self-directed projects, and looking for a first dedicated Data Analyst or Junior Data Scientist role to build on that foundation.

CORE SKILLS

Analysis & Reporting: SQL (joins, window functions, CTEs), Excel (pivot tables, Power Query), Power BI, Python (Pandas, NumPy)

Data Science / ML: Scikit-learn, XGBoost, PyCaret AutoML, basic PyTorch — model building & evaluation (ROC-AUC, cross-validation)

Programming: Python, SQL, R, Bash, JavaScript

Cloud & Data Eng (self-taught): AWS (S3, Glue, Athena, QuickSight), Apache Airflow, PySpark, Terraform, Docker

Other: Git/GitHub, Streamlit, Plotly/Seaborn

PROFESSIONAL EXPERIENCE

Care Assistant & Data Analyst — Everycare Ltd

Apr 2023 – Jun 2026 | London, UK

- Owned data quality for operational care records in Excel, building pivot models and dashboards that tracked incident logs, attendance patterns, and staff allocation for shift leaders.
- Built Power BI reports visualising medication timings, risk indicators, and response times, and presented weekly operational insights to senior management.
- Wrote Python scripts to clean and standardise raw care logs, cutting manual admin time and improving data accuracy ahead of management audits.
- Delivered front-line care work in parallel, maintaining digital records under GDPR and safeguarding requirements — developed close attention to data accuracy and confidentiality.

Team Member — KFC (Demipower Ltd)

Jan 2021 – Mar 2023 | Wood Green, London, UK

- Managed order throughput and inventory tracking during high-volume periods, building strong habits around accuracy and time-pressured decision-making.

INDEPENDENT PROJECTS

Portfolio work — academic, Coursera-linked, and independent — not paid employment. Code and write-ups on GitHub.

Australian Rainfall Forecasting (Postgraduate Dissertation) [Academic Project]

Python, PyCaret AutoML, Scikit-learn, XGBoost, Pandas, Statsmodels

- Built an end-to-end classification pipeline forecasting next-day rainfall from Australian weather station data, including automated EDA and outlier handling.
- Compared XGBoost, Random Forest, and Gradient Boosting models via PyCaret AutoML, evaluating with ROC-AUC and standard classification diagnostics.

GitHub: github.com/Xclipxz07/Rainfall-prediction

AWS Serverless Data Lakehouse [Coursera Project]

AWS S3, Glue, Athena, QuickSight, Terraform, SQL

- Designed a serverless data lakehouse on AWS with automated Glue Data Catalog crawlers and Terraform-managed infrastructure.
- Reduced Athena query costs by partitioning data as Snappy Parquet and adding per-query scan limits.
- Wrote descriptive, diagnostic, predictive, and prescriptive SQL analyses for an example executive BI use case.

GitHub: github.com/Xclipxz07/aws-serverless-data-analytics-lakehouse

Big Data Ad-Revenue Pipeline (Simulated Media Dataset) [Independent Project]

PySpark, AWS EMR, Apache Airflow, DuckDB, Parquet, Terraform

- Built a nightly batch pipeline ingesting multi-format ad logs (JSON, CSV, XML) and computing regional yield metrics using PySpark on AWS EMR, orchestrated with Airflow.

GitHub: github.com/Xclipxz07/channel4-bigdata-ad-pipeline

Sales Forecasting App with ML + GenAI [Independent Project]

FastAPI, OpenAI GPT-4 API, Scikit-learn, Docker, Kubernetes, Jenkins

- Built a sales forecasting API combining a Scikit-learn model with OpenAI's API for narrative summaries, containerised with Docker and deployed via a Jenkins CI/CD pipeline.

GitHub: github.com/Xclipxz07/DATA-ANALYSIS-FOR-DEVOPS-MLOPS-GENAI

Healthcare A&E Waiting-Time Analytics (Public Dataset) [Independent Project]

AWS S3, Glue, Athena, Airflow, Terraform

- Built a data lakehouse over public NHS-style A&E waiting-time data, applying SHA-256 hashing to practice patient-identifier pseudonymisation techniques.

GitHub: github.com/Xclipxz07/nhs-patient-healthcare-analytics-lakehouse

Predictive Healthcare ML with Scikit-Learn & XGBoost [Coursera Project]

Python, Scikit-Learn, XGBoost, Pandas, NumPy, Seaborn

- Built a supervised classification pipeline on a public biometric dataset, preprocessing records and tuning XGBoost with ROC-AUC, precision, and recall diagnostics.

GitHub: github.com/Xclipxz07/scikit-learn-ml-classification-healthcare

Computer Vision with AWS AutoGluon [Coursera Project]

Python, AWS AutoGluon, OpenCV, Deep Learning

- Built an automated image classification pipeline using AWS AutoGluon Vision, applying transfer learning to a public medical imaging dataset.

GitHub: github.com/Xclipxz07/aws-autogluon-image-classification

EV Digital Twin: AI Physics Surrogate Model [Coursera Project]

Python, Scikit-Learn, SciPy, DuckDB, Parquet, Airflow, Terraform

- Trained a machine learning surrogate to approximate CFD aerodynamic simulation outputs at a fraction of the original compute time, applying concepts from a Physics background.
- Implemented battery thermal gradient monitoring and used SciPy SLSQP optimisation for simulated aero-flap tuning.

GitHub: github.com/Xclipxz07/ai-mechanical-engineering-digital-twin

EDUCATION

Postgraduate Diploma, Data Science & Its Applications — Distinction

University of Essex, Colchester, UK — Nov 2022 (165 credits)

BSc (Honours) Physics

University of Calcutta, India — Aug 2021, CGPA 7.24

I.S.C (12th Grade) — Pure Science & Mathematics

St. Xavier's Institution, Kolkata, India — Apr 2017, 85.0%

I.C.S.E (10th Grade)

St. Xavier's Institution, Kolkata, India — Apr 2015, 93.8%

CERTIFICATIONS & CLEARANCES

- AWS Data Analytics — applied in AWS Serverless Data Lakehouse project below — [Verify](#)
- Microsoft Data Analysis (SQL, Excel & Power BI) — [Verify](#)
- Google AI Professional Certificate — [Verify](#)
- Gemini for Developers Specialization — [Verify](#)
- Scikit-Learn for ML Classification — applied in Predictive Healthcare ML project below — [Verify](#)
- Image Classification with AutoGluon — applied in AutoGluon Vision project below — [Verify](#)
- AI for Mechanical Engineers (Univ. of Michigan) — applied in EV Digital Twin project below — [Verify](#)
- Data Engineering Guides — 8 Master Blueprints
- English SELT ISE I, Trinity College London — Distinction (Speaking, Listening & Writing)
- Enhanced DBS Certificate — Active & Verified
